EDUCATION

Vellore Institute of Technology (VIT Bhopal University) — Bhopal, MP
B.Tech in Computer Science & Engineering (Specialization in AI & ML) — Expected May 2029
Academic Performance: Cumulative GPA: **9.28 / 10.0**

TECHNICAL SKILLS

Languages:	Python, JavaScript, Java, C++, SQL, C, Prolog
Backend & Web:	Node.js, Express.js, RESTful APIs, JSON Handling, Relational Database Modeling (SQL), Dynamic Routing
Developer Tools:	Git, GitHub (Branching, Merge Conflicts), Linux/Bash, VS Code
Core Engineering:	Data Structures & Algorithms, Object-Oriented Design (OOD), Neural Networks, Graph Analytics

HACKATHONS & MAJOR ACHIEVEMENTS

Winner (1st Place) — IntelliTrace Hackathon 2026 — **INR 1,00,000 Cash Prize**
National Hackathon organized by VIT Chennai in partnership with Indian Bank • Problem Statement: Supply Chain Fraud Detection

- Architected an anti-fraud backend pipeline to intercept concealed financial irregularities across multi-tier networks before capital loss occurs.
- **Phantom Invoicing Detection:** Engineered real-time verification algorithms to intercept ghost billings and suspicious vendor connections.
- **Graph Analytics & Anomaly Scoring:** Mapped transactions into relational graph models to uncover disguised circular trading loops; generated real-time risk scores for institutional lending decisions.
- **Version Control:** Managed repository branching, pull requests, and continuous build stability across the team under strict milestone deadlines.

TECHNICAL PROJECTS

CareerNova — Career Exploration & Roadmap Engine — Python, Node.js, SQL, REST APIs, Git

- Engineered backend microservices using Node.js and Python to analyze user skill vectors and deliver tailored learning paths.
- Built modular RESTful endpoints with strict JSON schema validation, minimizing query latency and eliminating redundant database hits.
- Designed a normalized relational database schema to persist user roadmaps, milestones, and metadata with zero data redundancy.

MediCube — Healthcare Records Consolidation & Logic Engine — Node.js, Express.js, SQL, REST APIs, Git

- Developed a structured record-ingestion engine consolidating heterogeneous patient records into a normalized SQL database.
- Constructed Express.js middleware to sanitize payloads and enforce medical constraint checks before data persistence.
- Separated route controllers and data layers using OOP principles, ensuring clean maintainability and thread-safe operations.

Air Quality Index (AQI) Anomaly Predictor — Python, Machine Learning (Random Forest), Pandas, Git

- Developed an environmental regression pipeline predicting regional AQI levels from multi-sensor atmospheric metrics.
- Implemented data cleaning, outlier imputation, and feature engineering to maximize regression model precision.

CERTIFICATIONS

- **Supervised Machine Learning: Regression and Classification** — DeepLearning.AI & Stanford University (Issued Sep 2025 | Credential ID: 54L37PJKDY56)
- **Advanced Learning Algorithms** — DeepLearning.AI (Issued Dec 2025 | Credential ID: DYNSJ3FXBJ7D)
- **Data Visualization** — Kaggle (Issued Feb 2026)

LEADERSHIP & CLUB ALIGNMENT

- **E-Cell Software Team Alignment:** Ready to build and maintain high-traffic E-Summit registration systems, automated participant databases, and backend services with strict Git hygiene.
- **School Basketball Team Captain:** Directed on-court strategy, conditioning drills, and live game decisions for a 12-member squad; refined real-time crisis communication under intense match pressure.
- **House Captain & Student Marshal:** Coordinated event logistics, rosters, and conflict resolution across large student bodies during inter-house championships.
